

Why AI projects differ from tradition

- 1- Outcome Uncertainty $\begin{cases} \text{Probabilistic} \\ \text{Deterministic} \end{cases}$
- 2- Evolving requirements
- 3- Experimentation - Complex - Non-linear
- 4- Multidisciplinary Nature
- 5- Model and Data Dependency
- 6- Ethics and Regulatory Concerns

AI/DS Project Lifecycle

- 1- Problem framing & Contextual Discovery
- 2- Data understanding & Acquisition
- 3- Data preparation
- 4- Modeling Strategy & Competitive Architecture Design
- 5- Experimentation, Iteration, Evaluation, & Model Building
- 6- Validation testing and Cognitive readiness
- 7- Deployment, Monitoring, and Learning Loops
